Introducing our exclusive CSO-T package for the McLaren 720s/750s/765LT, meticulously designed to elevate your McLaren's power to new heights. With carefully engineered modifications to the intake and exhaust systems and a coinciding ECU calibration, we unleash the true potential of your P14 Chassis McLaren, delivering an astounding 900+ horsepower measured at the wheels.

Our CSO-T package delivers precision-calibrated ECU enhancements, ensuring optimal engine power and responsiveness. Unlike generic "Stage 1 & Stage 2" tunes, we avoid underperformance or potential risks to your engine's well-being. Utilizing data-logging and dyno testing, our calibrations fine-tune the air/fuel ratio and ignition timing for your specific vehicle, unlocking its full potential while prioritizing reliability and drivability. Cutting-edge technology, including Map Switching for various fuel types and a valet map for added security, enhances your driving experience. Opt for the Rolling Anti-Lag upgrade for an extra thrill, building boost pressure in motion and leaving competitors in the dust.

The CSO-T package is the culmination of our expertise and passion for automotive excellence. With this upgrade, we unlock the untapped potential that McLaren left on the table, propelling it from amazing to truly extraordinary. Improvements to your car's intake system enhances the efficiency of air intake into the engine, while the high-flow exhaust system optimizes flow, bolstering horsepower and delivering an assertive and captivating soundtrack that is bound to command attention wherever your journey takes you.
